LSL Levy Advice Report (New)

Release Note Details

- **Note:** Patch 28236 is for 2018.00, patch 28237 is for 2019.00
- Fixes an issue where pressing **ENTER** to select the included or excluded **Leave and Absences** codes to be used in the Formula A and B calculations did not bring up the selection screen
- Fixes an issue where an error message "ttLeave already exists with ..." was displayed if an employee had 2 (or more) absences recorded for the same date but with different absence codes. This message would only appear if at least 2 of the absence codes for that date were included (or not specifically excluded) as either **Unpaid Leave Codes** or **Worker's Comp Codes**.
